## **Class Diagram Design**

#### 1. Class "InterbankInterface"

## <<interface>> InterBankInterface

- + <<exception>> payOrder(order : Order) : PaymentTransaction + <<exception>> reFund(order : Order) : PaymentTransaction
- + <<exception>> getBalance(order : Order) : int

#### Attribute

- None

### **Operation**

#	Name	Return type	Description (purpose)	
1	payOrder	PaymentTransaction	Pay order, and then return the payment transaction	
2	refund	PaymentTransaction	Refund, and then return the payment transaction	
3	getBalance	int	Get the difference between the money that a country receives from exports and the money that it spends on imports on this order	

#### Parameter:

- Order: the order inform includes shipping and cart information.

#### Exception:

- PaymentException if responded with a pre-defined error code
- UnrecognizedException if responded with an unknown error code orsomething goes wrong

#### Method

- None

#### State

- None

## 2. Class "PaymentController"

	,
ı	< <control>&gt;</control>
I	PaymentController
	- card : Card - interbank : InterbankInterface
	+ payOrder(amount : int, contents : String, cardNumber : String, cardHolderName : String, expirationDate : String, securityCode : String) : Map <string,string> - getExpirationDate(date : String) : String</string,string>

#### Attribute

#	Name	Data type	Default value	Description
1	card	Card	NULL	Represent the card used for payment
2	interbank	InterbankInterface	NULL	Represent the Interbank subsystem

## **Operation**

#	Name	Return type	Description (purpose)
1	payOrder	Map <string,string< td=""><td>Pay order, and then return the result with a message</td></string,string<>	Pay order, and then return the result with a message

#### Parameter:

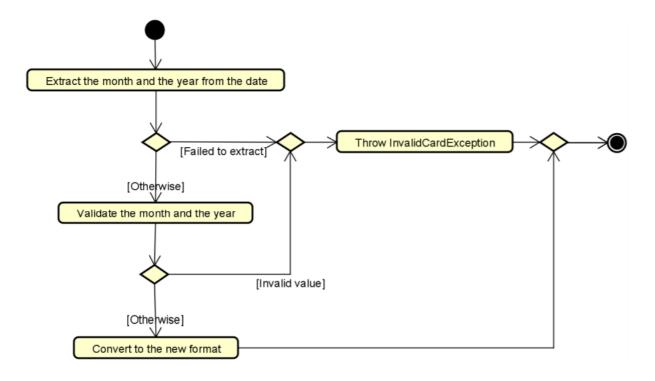

- amount the amount to pay
- contents the transaction contents
- cardNumber the card number
- cardHolderName the card holder name
- expirationDate the expiration date in the format "mm/yy"
- securityCode the cvv/cvc code of the credit card

## Exception:

- None

#### Method

getExpirationDate: Given the String "date" representing the expiration datein the format "mm/yy", this method convert it into the required format "mmyy."

#### 3. Class "PlaceOrderController"

## <<control>>

## **PlaceOrderController**

- + confirmInvoice(invoice : Invoice) : void
- + processDeliveryInfo(): Order
- + placeOrder(cart : Cart) : void
- + validateDeliveryInfo(order: Order): boolean
- + calculateShippingFees(order: Order): void

#### Attribute

- None

#	Name	Return type	Description (purpose)
---	------	-------------	-----------------------

1	placeOrder	void	Place an order, receiving the entity Cart
2	processDeliveryInfor	Order	Represent DeliveryForm, store the information of User, Utils, and Cart and then export to an order
3	validateDeliveryInfo	boolean	Validating the Delivery information, receiving the entity Order
4	calculateShippingFees	void	Calculating the sum of Media and the shipping fees, receiving the entity Order
5	confimInvoice	void	Confirming the Invoice, receiving the entity Invoice

- None

#### Exception:

- None

#### Method

- None

#### 4. Class "PlaceRushOrderController"

# <<control>> PlaceRushOrderController

- + placeRushOrder(order: Order): void
- + changeFormualaShippingFees(): void

#### Attribute

- None

# Name Return type Description (purpose)	#	Name	Return type	Description (purpose)
--	---	------	-------------	-----------------------

1	changeFormualaShippingFees		Calculating the shipping fees when user uses rush order
2	placeRushOrder	void	Operating the action of Place Rush Order, check the valid Media and Location of Delivery, receiving the entity Order

- None

#### Exception:

- None

#### Method

- None

5. Class "DeliveryForm"

## <<br/>boundary>><br/>DeliveryForm

- + notifyUpsupportedShippingFees(): void
- + requestToPlaceRushOrder(order : Order) : void
- + notifyInvalidDeliveryInfo(): void
- + chechSupportedShippingFees(): boolean
- + displayRushOrderScreen(): void
- + submitDeliveryForm(): void
- + notifyUnsupportedMedia(): void
- + Initialize(cart : Card) : void

#### Attribute

- None

#	Name	Return type	Description (purpose)
1	initialize	void	Initializing the Delivery Form after clicking the button "Place Order" in class ViewCartScreen,

			receiving the entity Cart
2	submitDeliveryForm	void	Storing the information of Order when user clicks button "Confirm Delivery"
3	requestToPlaceRushOrder	void	Requesting Place Rush Order when user clicks the button "Place Rush Order"  Receiving the entity Order
4	displayRushOrderScreen	void	After the sequence actions in PlaceRushOrderControlller, DeliveryForm shows the information of Rush Order
5	checkSupportedShippingFees	boolean	Checking whether Media is supported by Shipping
6	notifyInvalidDeliveryInfo	void	Notify Invalid delivery information, allowing the user to change some information
7	notifyUnsupportedMedia	void	Notify Media is not supported, allowing the user to change Media
8	notifyUpsupportedShippingFees	void	Notify Location is not supported Shipping Fees, allowing the user to change Location

- None

## Exception:

- None

#### Method

- None

## 6. Class "ViewCartController"

#### Attribute

- None

## **Operation**

#	Name	Return type	Description (purpose)
1	createCart	Cart	Creating the cart, which has the list of Media

#### Parameter:

- None

#### Exception:

- None

#### Method

- None

#### 7. Class "ViewCartScreen"

## <<body> <<br/>ViewCartScreen

- + requestToPlaceOrder(): Cart
- + displayCartWithProductAvailability(): void
- + initializeCartScreen(): void

#### Attribute

- None

#	Name	Return type	Description (purpose)
1	requestToPlaceOrder		Saving the information of Media when users choosin Cart Screen after clicking the button "Place Orc
2	displayCartWithProductAvailability	void	Displaying the Media that exists in the Cart

3	initializeCartScreen	void	Initializing Cart Screen

- None

## Exception:

- None

#### Method

- None

8. Class "PaymentForm"

# <<body><br/><br/>PaymentForm</br/>

+ notifyError: Not enough balance(): void

+ requestToPayOrder(invoice : Invoice) : void

+ confirmToPayOrder(): void

+ notifyError: Invalid card(): void

#### Attribute

- None

_				
	#	Name	Return type	Description (purpose)
	1	requestToPayOrder	void	Taking the actions of paying Order, receiving the entity Invoice
	2	confirmToPayOrder		Saving the information of Invoice when users clic the button "Confirm Payment" Receiving the entity Invoice
	3	notifyError: Invalid card()	void	Notifying the Error: Invalid card

4	notifyError: Not enough balance()	void	Notifying the Error: Not enough balance

- None

## Exception:

- None

#### Method

- None

9. Class "PaymentTransaction"

# <<entity>> PaymentTransaction

- amount : int

- card : Card

+ transactionID: int

- errorMessage : String

- transactionTime : Timestamp

content : StringtransactionId : int

+ savePaymentTransaction(): void

#### Attribute

#	Name	Data type	Default value	Description
1	transactionID	int	NULL	Represent the Id transaction used for payment
2	card	Card	NULL	Represent the information of Card used for payment
3	amount	int	NULL	Represent the amount of the payment
4	transactionTime	Timestamp	NULL	Represent the transaction time of the payment

5	content	String	NULL	Represent the content of the payment
6	errorMessage	String	NULL	Represent the error during the transaction

## **Operation**

#	Name	Return type	Description (purpose)
1	savePaymentTransaction	void	Saving the payment transaction

#### Parameter:

- None

## Exception:

- None

#### Method

- None

## 10. Class "InvoiceScreen"

## <<br/>boundary>><br/>InvoiceScreen

- + display(invoice : Invoice) : void
- + confirmInvoice(): void
- + displaySucessOrder(): void

#### Attribute

- None

#	Name	Return type	Description (purpose)
1	display		Displaying the InvoiceScreen and receiving the entity Invoice

2	confirmInvoice	void	Saving the information of Invoice when user clic the button "Confirm Invoice"
3	displaySuccessOrder		Displaying the notification of Success Order after user completes the actions of place order

- None

## Exception:

- None

## Method

- None
